ABSOLUTE SLIDING PANELS

We are now using the **Coulisse Absolute Sliding Panel** system for Roller Shades, Natural Roller Shades, and Natural Shades.

The new sliding panel system uses improved hardware for better installation and operation. Panels have a smoother glide in the new track system and pass each other without catching when in operation.

This new system will have the same ordering options as our old system:

- One way and split draw operation
- Between three and five panels for one way
- 4, 6, and 8 panels for split draw
- The same minimum and maximum sizes
- The same inside mount width and height deductions
- No deductions for outside mount
- 2 1/2" overlap between panels

SHADES™

INSTALLATION

The Absolute Sliding Panel track clicks into the installation brackets rather than using swivel brackets for a clean and simplified installation.

OPERATION

Panels are installed to top rails which click into runners that move smoothly in the track and allow easy passage of panels.

IMPROVED STYLE

Clear Acrylic pull wands seamlessly blend with panels when not in operation.

Valances are also updated with a valance board available for Natural Shades and an improved box valance installation for Roller and Natural Roller Shades.
