LED SCREEN

The new remotes feature a light-up LED screen. Now it is easy to know which shade you are operating, even when the room is dark.

AAA BATTERIES

The redesigned remotes are powered by AAA batteries.

Moving away from coin cell batteries has allowed us to make the back of the remote easier to remove. Changing out the batteries is now a simpler experience.

REDESIGNED REMOTES

The Inspired Shades hand-held remotes have been redesigned. Our new, proprietary design is now available across all our collections.

The new remote retains all the programming steps and capabilities you're familiar with, including 15 programmable channels for versatile shade control. You can also hide unused channels easily following simple programming steps.

In addition to the sleek new look, the remotes have improved functionality including light-up LED screens, AAA battery power, and easy-to-remove back panel.
