

# SOLAR SCREENS FEATURES

Solar screens are a fabric option available in our **Roller Shade Collection**. Solar fabrics help to create an energy-efficient space while still preserving your view to the outside.

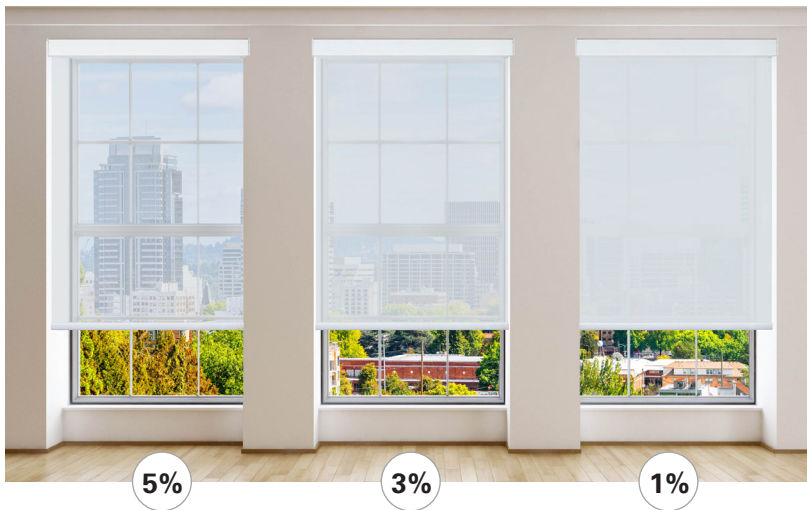

## *Fabric Properties:*

Most solar screen fabrics are made of **PVC**, which **absorbs heat** and is **fire retardant**. Solar fabrics also provide protection from the sun by **blocking UV rays**.

## *Openness Factors:*

The Inspired Shades Collection offers solar screen fabrics in **1%, 3%, 5%, and 8% openness factors**. Openness factors have an inverse correlation to UV ray blocking. For example, a fabric with a 1% openness factor will block 99% of UV rays.

## *Heat Management and Glare Reduction:*

Solar fabrics that are **lighter in color** reflect away heat and provide less glare reduction because they allow more light to pass through. Lighter fabrics have less view through.

Solar fabrics that are **darker in color** absorb heat and provide more glare reduction by allowing less light to pass through. Darker fabrics have more view through.
